Robert Hill

Software Engineer

(250)863-2574 | rhill352@gmail.com | thathillguy | thathillguy

Summary

Seasoned Software Engineer with a decade of full-stack experience building and scaling cloud-based, data-intensive applications. Proven track record of leading teams and owning backend systems, delivering high-impact features and 0→1 product capabilities that drive customer retention and business growth. Experienced in real-time analytics, large-scale data processing, and making pragmatic tradeoffs between scalability, performance, and system complexity.

Experience

AcuityMD

Toronto, ON, Canada

SENIOR SOFTWARE ENGINEER

Nov. 2022 – PRESENT

- Led a team of 5 engineers to deliver Forecasting and Advanced Tier product offerings end-to-end, partnering with product and design to define technical scope, feasibility, and timelines, and executing against aggressive delivery targets.
- Delivered a real-time full-stack analytics platform (Node.js, Python, React) enabling leadership personas to gain visibility into sales pipeline, account health, and team performance, contributing to retention of customers representing ∼$1M ARR.
- 0→1 led development of a CRM integration platform supporting Salesforce, HubSpot, Microsoft Dynamics, and Zoho, enabling real-time event synchronization via webhooks and introducing an event-driven architecture to decouple core systems and unlock enterprise integrations.
- Owned and evolved the primary backend service, leading migration from a Hasura-based GraphQL backend to a scalable REST API architecture, improving developer velocity and enabling more flexible, complex business logic.
- Improved p95 query latency by 95% (30s → 1.7s) on multi-million row analytical queries by implementing dynamic query generation and leveraging a hybrid approach combining direct SQL and in-memory DuckDB execution for compute-heavy workloads.
- Designed backend scaling strategy balancing horizontal replication and vertical scaling for memory-intensive workloads, consciously trading off service decomposition for reduced system complexity and faster iteration in a startup environment.
- Stewarded CI/CD, cloud infrastructure, and developer experience, improving deployment reliability and enabling engineers to iterate quickly across a multi-language stack.

Rackspace Technologies Ltd

Toronto, ON, Canada

SOFTWARE ARCHITECT

Nov. 2020 – Nov. 2022

- Consulted clients on cloud migrations across AWS, GKE, and Azure, enabling secure and efficient infrastructure transitions.
- Led development of an IoT tracking system for airline carts, integrating custom Grafana dashboards for real-time monitoring, delivering hundreds of thousands in annual cost savings.
- Architected and deployed international IoT device solutions for a global aesthetics firm, ensuring regional regulatory compliance including China.
- Established CI/CD pipelines using GitHub Actions, Jenkins, and AWS CodePipeline, accelerating delivery and improving software reliability.
- Facilitated architecture discussions translating complex business requirements into scalable system designs, driving successful project outcomes and client satisfaction.

MDA Systems Ltd
Halifax, NS, Canada

SOFTWARE DEVELOPMENT ENGINEER
Nov. 2018 – Nov. 2020

- Developed Canada's next-generation search-and-rescue system for the Department of Defense, deploying multiple microservices to specialized government infrastructure and enhancing mission effectiveness.
- Built and launched interactive geo-information systems using Angular, Redux, and OpenLayers for accurate real-time geographic data visualization.
- Designed real-time ETL pipelines with Jasper Reports, significantly improving operational reporting accuracy and efficiency.
- Led and mentored a team of interns, delivering microservices and frontend components that boosted team throughput.

AquaAir24/7
Kelowna, BC, Canada

SOFTWARE DEVELOPMENT ENGINEER
Apr. 2018 – Nov. 2018

- Developed a ground-up IoT solution for real-time remote monitoring of global water filtration systems, reducing maintenance costs by proactively identifying repairs and detecting tampering.
- Implemented MQTT protocols and cellular data transmission for reliable global device tracking, enhancing operational efficiency and security.

Intellimed Inc
Vancouver, BC, Canada

ASSOCIATE SOFTWARE DEVELOPMENT ENGINEER
Jan. 2014 – Jan. 2016

- Collaborated with senior engineers to prototype innovative technologies, enabling pharmacists to efficiently generate critical patient documentation and support more patients.
- Integrated on-premise and public patient data sources to enhance medical data cross-referencing, improving medication safety and patient care outcomes.

Honors & Awards

2025	**The Gritty Award** , AcuityMD — Recognized for ownership and execution in delivering key product initiatives	*Toronto, ON, Canada*
2022	**Racker to the Core Award**, Rackspace — Recognized for impact and leadership as a System Architect	*Toronto, ON, Canada*

Education

University of British Columbia
Kelowna, BC, Canada

Bachelor of Science (Honours) in Computer Science
September 2013 – May 2018
